Glossary

Term	Description
ACOEM	Acoem Australasia (EcoTech) Pty Ltd
API	Application Programming Interface
AQMP	Air Quality Monitoring Program
AQMS	Air Quality Monitoring Station
Australian Standard measuring methods	A set of Australian Standards which detail the type of equipment required to measure pollutants and meteorological parameters and the correct siting of the monitoring equipment.
BAM	Beta Attenuation Monitoring
BoM	Bureau of Meteorology
Calm	Wind speeds below 0.5 m/s.
Correlation	Correlation measures the linear relation between two variables. A strong positive correlation (close to 1) indicates that when one variable increases, the other also increases. A strong negative correlation (close to -1) indicates that when one variable increases, the other decreases.
GHD	GHD Pty Ltd
NATA	National Association of Testing Authorities
Air NEPM	National Environment Protection Measure (Ambient Air Quality)
NO ₂	Nitrogen dioxide
NSW	New South Wales
NSW EPA stations	New South Wales EPA Air Quality Monitoring Stations
PM ₁₀	Particulate matter with diameter less than 10 micrometres (10 µm).
PM _{2.5}	Particulate matter with diameter less than 2.5 micrometres (2.5 µm).
Port Authority	Port Authority of NSW
Polar plot	A polar plot illustrates how pollutant concentrations vary with both wind direction and wind speed over a given period. Each sector represents winds coming from a particular direction, while the distance from the centre shows increasing wind speed. The colour within each sector corresponds to the average pollutant concentration associated with that combination of wind direction and wind speed. Cooler colours (blue) indicate lower concentrations, while warmer colours (yellow to red) indicate higher concentrations. For example, in the below PM_{2.5} polar plot, the highest concentrations occur when winds are from the west to south-west at moderate wind speeds (approximately 2–6 m/s). This is shown by the orange and red shading in the western sector at mid-range distances from the centre. In contrast, winds from the north and east are generally associated with lower PM_{2.5} concentrations, indicated by the predominately blue shading in those sectors.

Term	Description
	
Pollution rose	A pollution rose illustrates the frequency of occurrence of various pollutant concentrations in each wind direction for a given month. The length of 'petal' in a direction corresponds to the frequency of occurrence of a pollutant when wind is blowing from that direction. The colour within each 'petal' corresponds to the level of concentration of the measured pollutant. For example, in the pollution rose below, winds from the South occur for approximately 60% of the time. Of that 60%, 30% of the pollutant concentrations are between 0.2 to 0.4 ppb, 25% of the pollutant concentrations are between 0.5 to 1 ppb and so on. This is indicated by the length of the shading on the petals. 
Sigma	Standard deviation of wind direction, can be used to calculate atmospheric stability
SO ₂	Sulphur dioxide

Term	Description
Windrose	A wind rose illustrates the frequency of occurrence of winds of various speeds in each wind direction for a given month. The length of 'petal' in a direction corresponds to the frequency of wind blowing from that direction, while the colour within each 'petal' corresponds to the wind speeds. For example, in the wind rose below, winds from the South occur for approximately 30% of the time. Of that 30%, 15% of the wind speeds are between 0.5 to 2 m/s, 13% of the wind speeds are between 2 to 5 m/s and 2% of the wind speeds are between 5 to 7.7 m/s. This is indicated by the length of the shading on the petals.  mean = 1.9 calm = 17.9% 0.5 to 2 2 to 5 5 to 7.7 (m s⁻¹) Frequency of counts by wind direction (%)

1. Introduction

Port Authority of NSW (Port Authority) is implementing an air quality monitoring program at Glebe Island and White Bay, Sydney, NSW for a five-year period. The monitoring program is intended to accurately isolate and measure air quality impacts from activities related to Port Authority of New South Wales (Port Authority) or its tenants and customers at the Bays Precinct, including the White Bay Cruise Terminal (WBCT).

Port Authority has engaged GHD Pty Ltd (GHD) to undertake this air quality monitoring program, including annual reporting and data analysis. Acoem Australasia (EcoTech Pty Ltd) (ACOEM) has been engaged as the monitoring equipment supplier. ACOEM is an Australia National Association of Testing Authorities (NATA) accredited company and conducts all required maintenance and calibration of the monitoring equipment as well as validation of the collected data.

This air quality monitoring report presents the analysis of annual data collected by two Air Quality Monitoring Stations (AQMS) including Glebe Island station and Grafton Street station within the Bays Precinct for the period 01 January 2025 to 31 December 2025. The validated monitoring data were provided by ACOEM, which are attached in Appendix B.

1.1 Scope of work

The scope of this report is summarised in Table 1.1.

Table 1.1 Scope of report

Scope of work	Description	Refer to section of report
Project Overview	Relevant monitoring and the purpose of undertaking the current air quality monitoring program for a 5-year period.	Section 2
Legislative Context	Environmental values, air indicators and objectives that set the benchmark for the quality of the air environment needed to protect environmental values in NSW.	Section 3
Methodology Summary	Summary of monitoring equipment in the two AQMS, the parameters and pollutants measured, and data analysis undertaken.	Section 4
Data information	Data availability and quality during the period.	Section 5
Data review	Review of data during the period.	Section 6
Data analysis	– Direct comparison of measurement data to the assessment criteria summarised in Section 3.4. – Assessment of regional air quality data in comparison to measurements undertaken at the Bays precinct.	Section 7
Summary	Summary of findings	Section 8

1.2 Limitations

This report has been prepared by GHD for Port Authority of NSW and may only be used and relied on by Port Authority of NSW for the purpose agreed between GHD and Port Authority of NSW as set out in section 1.1 of this report.

GHD otherwise disclaims responsibility to any person other than Port Authority of NSW arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report (refer section(s) 1.3 of this report). GHD disclaims liability arising from any of the assumptions being incorrect.

1.3 Assumptions

The content of this report is subject to the following assumptions:

- Data provided by ACOEM has been validated and is NATA accredited.
- Data provided by the NSW government is as uploaded via the developer portal API.
- Elevated particulate concentrations at Bays monitoring locations does not mean that similar concentrations are experienced offsite. The monitoring locations are close to sources of site emissions, and the measurements should not be used for compliance purposes.

2. Project overview

2.1 Monitoring overview

The Bays Precinct air quality monitoring program was established to provide continuous insight into ambient air quality conditions at key operational berths within the Bays Precinct. Monitoring locations were established in the Bays Precinct Air Quality Monitoring System – Air Quality Monitoring Plan (AQMP) (GHD, 2025) to best represent potential air quality impacts in the Bays Precinct, considering prevailing winds, port operations, and proximity to sensitive receptors.

The monitoring comprises two AQMS commissioned at Glebe Island on 29 January 2025 and at Grafton Street on 6 August 2025. These two AQMS provide real-time measurements of pollutants and meteorological conditions in accordance with relevant Australian standards and form the core dataset for this reporting period. To place site-specific results in a broader regional context, pollutant observations from three local NSW EPA air quality monitoring stations (NSW EPA stations) were incorporated into the analysis.

Together, these datasets offer a consistent basis for assessing air quality trends within the Bays Precinct, understanding local operational influences and comparing onsite observations against regional background conditions.

The monitoring locations, along with the nearby NSW EPA stations, are shown in Figure 2.1.

Figure 2.1 Monitoring locations and nearby NSW EPA stations

2.2 Site historical monitoring

2.2.1 Air quality monitoring 2014

Lear Siegler Australasia was engaged by Sydney Ports Corporation (now Port Authority of NSW) to install and commission an AQMS at the corner of Grafton Street and Adolphus Street, Balmain. This AQMS included an anemometer, Tapered Element Oscillating Microbalance (TEOM) to monitor PM₁₀ and a Thermo Scientific SO₂ analyser Model 43i to monitor ambient SO₂ concentrations. SLR Consulting Australia Pty Ltd was engaged to complete data analysis and quarterly reporting of the pollutant monitoring results beginning 21 September 2013.

2.2.2 Air quality monitoring 2015-2022

Pacific Environment (now ERM Australia Pacific Pty Ltd (ERM)) was engaged by Port Authority to undertake and report on monthly air quality monitoring in the residential area adjacent to WBCT from September 2015 to February 2022. In consultation with the NSW Environment Protection Authority (EPA), the monitoring station was installed at the corner of Adolphus Street and Grafton Street, Balmain (33.860142°S, 151.187413°E), 14 metres above sea level. The pollutants monitored were SO₂, particulate matter less than 2.5 micrometres in diameter (PM_{2.5}), wind speed and wind direction. Results compared against National Environment Protection (Ambient Air Quality) Measure (Air NEPM) assessment criteria for these two pollutants were reported monthly.

GHD have been given access to a period of monthly monitoring reports from January 2020 to February 2022. In summary, between January 2020 and February 2022, air quality monitoring at the White Bay Cruise Terminal residential area showed zero exceedances of SO₂ criteria, with peak concentrations consistently remaining below 6% of the NSW EPA limits. While 24-hour PM_{2.5} exceedances occurred, most notably nine recordings in January 2020 during extreme regional bushfire activity, these were attributed to regional environmental factors such as hazard reduction burns and smoke rather than terminal operations. Because the majority of this historical window coincided with COVID-19 pandemic restrictions, there were long intervals with no cruise ships berthed at the terminal, meaning the results primarily reflect the ambient urban background air quality of the area. Occasional technical instrument failures impacted PM_{2.5} data availability, specifically during late 2021 and the beginning of 2022.

2.2.3 Meteorological monitoring

An anemometer was set up on Glebe Island by Port Authority to collect wind speed and wind direction at an elevation of approximately 30 metres from June 2021 to August 2023.

3. Legislative Context

This section summarises the environmental values, air indicators and objectives that set the benchmark for the quality of the air environment needed to protect environmental values in NSW, Australia.

3.1 Air NEPM

The National Environment Protection (Ambient Air Quality) Measure (Air NEPM) developed by the Commonwealth's National Environment Protection Council provides standards for pollutant levels in ambient air. The Air NEPM standards apply for measurements taken in areas representative of the background levels the population is exposed to, for populations of more than 25,000 people. The Air NEPM standards do not apply to hot-spot locations such as near industry and roads. The standards are used by the various state Environment Protection Authorities (and equivalents) to track air quality trends in the general population of the state. The Air NEPM standards are not designed to be used for directly regulating individual projects, but the Air NEPM values/criteria are nevertheless used in some cases for evaluating air quality near a specific project (as in this case).

The following air quality indicators, and respective objectives, relevant to this assessment are outlined below in Table 3.1 and Table 3.2.

Table 3.1 Standards for Pollutants (the Air NEPM)

Item	Pollutant	Averaging Period	Maximum Concentration Standard	
			ppm	µg/m ³
1	Carbon monoxide	1 hour	25	30,000
		8 hours	9.0	10,000
2	Nitrogen dioxide	1 hour	0.08	164
		1 year	0.015	31
3	Photochemical oxidants	8 hours	0.065	139
4	Sulfur dioxide	1 hour	0.10	286
		1 day	0.02	57
5	Lead	1 year	-	0.50
6	Particles as PM ₁₀	1 day	-	50
		1 year	-	25
7	Particles as PM _{2.5}	1 day	-	25
		1 year	-	8

Table 3.2 Standards and Goals for SO₂ and PM_{2.5} from 2025 (the Air NEPM)

Pollutant	Averaging Period	Maximum concentration
Sulfur dioxide	1 hour	0.075 ppm
Particles as PM _{2.5}	1 day	20 µg/m ³
	1 year	7 µg/m ³

3.2 Approved methods for sampling and analysis of air pollutants in NSW

The Approved Methods for the Sampling and Analysis of Air Pollutants in New South Wales (NSW EPA, 2022a) lists the methods to be used for the sampling and analysis of air pollutants in NSW for statutory purposes. It is noted that the monitoring program complies with the guidelines.

3.3 Approved methods for modelling and assessment of air pollutants in NSW

The Approved Methods for Modelling and Assessment of Air Pollutants in New South Wales (NSW EPA, 2022b) (the Approved Methods) lists the statutory methods for modelling and assessing emissions of air pollutants from stationary sources in NSW. It considers the above-mentioned legislation and guidance to provide pollutant assessment criteria.

The assessment criteria are summarised in Table 3.3.

Table 3.3 Air quality impact assessment criteria as per the Approved Methods

Pollutant	Averaging period and percentile	Criteria ($\mu\text{g}/\text{m}^3$)	Source
SO ₂	1 hour ^a	286	NEPC (2021)
	1 hour ^b	215	NEPC (2021)
	24 hours	57	NEPC (2021)
NO ₂	1 hour	164	NEPC (2021)
	Annual	31	NEPC (2021)
Photochemical oxidants (as ozone)	8 hours	139	NEPC (2021)
Lead	Annual	0.5	NEPC (2021)
PM _{2.5}	24 hours	25	NEPC (2021)
	Annual	8	NEPC (2021)
PM ₁₀	24 hours	50	NEPC (2021)
	Annual	25	NEPC (2021)
TSP	Annual	90	NHMRC (1996)
Deposited dust ^c	Annual	2 g/m ² /month ^d 4 g/m ² /month ^e	NERDDC (1988)
Carbon monoxide	15 minutes	100 mg/m ³	WHO (2000)
	1 hour	30 mg/m ³	WHO (2000)
	8 hours	10 mg/m ³	NEPC (2021)

a. This impact assessment criterion applies to assessments prepared before 1 January 2025

b. This impact assessment criterion applies to assessments prepared after 1 January 2025

c. Dust is assessed as insoluble solids as defined by AS 3580.10.1–1991 (AM-19)

d. Maximum increase in deposited dust level

e. Maximum total deposited dust level

3.4 Summary of criteria

Assessment criteria for this project, which are also adopted in the project's quarterly reports, are taken from the Air NEPM, which are the same as those adopted in the Approved Methods, except for the PM_{2.5} standards, which are

more recent and more stringent in the Air NEPM than in the Approved Methods, and are therefore adopted for this project.

The air quality assessment criteria are summarised in Table 3.4.

Table 3.4 *Air quality impact assessment criteria*

Pollutant	Averaging period and percentile	Criteria	Source
PM _{2.5}	24-hour average	20 µg/m ³	Air NEPM
	Annual average	7 µg/m ³	Air NEPM
NO ₂	1 hour average	80 ppb	the Approved Methods and Air NEPM
	Annual average	15 ppb	the Approved Methods and Air NEPM
SO ₂	1 hour average	75 ppb	the Approved Methods and Air NEPM
	24-hour average	20 ppb	the Approved Methods and Air NEPM

4. Methodology summary

4.1 Parameters measured

Table 4.1 summarises the equipment included in the Glebe Island and Grafton Street stations, and the pollutants measured.

The pollutants and meteorological data measured and comparative pollutant data obtained by GHD for data analysis are summarised below:

- PM_{2.5}, SO₂ and NO₂ were continuously measured using equipment mentioned in Table 4.1 at two primary monitoring locations:
 - Glebe Island station
 - Grafton Street station
- Meteorological conditions including wind speed, wind direction, temperature and relative humidity were continuously measured at two primary monitoring locations:
 - Glebe Island station
 - Grafton Street station
- Regional pollutant measurements (PM_{2.5}, NO₂ and SO₂) were obtained from the nearby NSW EPA stations including:
 - Rozelle station
 - Bradfield Highway station
 - Cook and Phillip station

Table 4.1 Summary of monitoring equipment and pollutants measured

Equipment and hardware supplied	Pollutant/parameter measured	Measurement method	Australian Standard
Met One BAM 1020	Particles as PM _{2.5}	Beta ray attenuation (BAM) technology	AS/NZS 3580.9.12-2022
Ecotech Model Serinus® 40	Nitrogen dioxide (NO ₂)	Gas phase chemiluminescence technology	AS 3580.5.1-2023
Ecotech Model Serinus® 50	Sulphur dioxide (SO ₂)	Pulse UV Fluorescent Radiation technology	AS 3580.4.1-2023
Gill Windsonic Op3 at 6m	Wind speed, wind direction	Ultrasonic sensor	AS/NZS 3580.14-2014

4.2 Monitoring period

The period for this report was 01 January 2025 to 31 December 2025. It should be noted that the Glebe Island and Grafton Street monitoring stations were not operational for the full duration of this period. The Glebe Island station was installed and commissioned on 29 January 2025, while the Grafton Street station was installed and commissioned on 6 August 2025.

4.3 Data analysis

Data collected by the AQMS undergoes a NATA accreditation procedure undertaken by ACOEM to ensure all analysed data is valid. Any interruptions in monitoring or invalidated data are reported in Table 5.1.

Observations of each parameter were processed into averaging periods defined by the relevant criteria. Processed data are presented in Section 6 overlaid with cruise/other vessel presence at the port.

To provide regional context, Section 7 compares pollutant observations from Glebe Island and Grafton Street stations with measurements from the nearest NSW EPA stations at Rozelle, Bradfield Highway and Cook and Phillip. These comparisons are assessed against the relevant adopted criteria (refer to Section 3.4) and considered alongside wind conditions recorded at the Glebe Island and Grafton Street stations. This approach assists in understanding how localised conditions within the Bays Precinct relate to broader regional ambient air quality and in identifying potential risks to the receiving environment.

While comparisons with nearby NSW EPA stations provide useful regional context, these stations are located in different environments and potentially influenced by local or regional emission sources. Therefore, correlation (or the absence of correlation) between datasets should not be interpreted as an indication of data accuracy, but rather as a reflection of spatial variability across the region.

5. Data information

Table 5.1 summarises the availability and quality of the data measured by two onsite AQMS and three nearby NSW EPA stations over the reporting period between 01 January 2025 to 31 December 2025. As Glebe Island station and Grafton Street station were commissioned on a different date, the data availability presented reflects the proportion of valid 1-hour averaging data collected from each station's commissioning date (29 January 2025 for Glebe Island station and 6 August 2025 for Grafton Street station) through to 31 December 2025, rather than the full 1-year period for every monitoring location.

As brief interruptions are expected and routine due to automatic overnight span/background check, maintenance, etc., and longer gaps are more likely to indicate operational or power-related issues, missing data reported in Table 5.1 only include periods with data gaps exceeding 12 hours. Detailed summaries of missing data and valid data exceptions are provided in Appendix A.

ACOEM has conducted all required servicing and calibration for production of NATA accredited air quality data, and monthly data has been reviewed. Data presented in this report from the two onsite monitoring stations is NATA accredited.

Table 5.1 AQMS data availability and quality (01 January 2025 to 31 December 2025)

Parameters	Data availability (%)	Data capture period (Start – End)	Missing data (gap > 12 hours)
Glebe Island station			
PM _{2.5}	89.2	29/01/2025 14:00 - 01/01/2026 00:00	– 1/04/2025 18:00 - 3/04/2025 15:00 – 10/08/2025 5:00 - 10/08/2025 19:00 – 28/08/2025 19:00 - 29/08/2025 18:00 – 7/09/2025 6:00 - 7/09/2025 19:00 – 29/09/2025 6:00 - 29/09/2025 20:00 – 29/10/2025 9:00 - 30/10/2025 3:00 – 12/12/2025 20:00 - 13/12/2025 11:00

6. Monitoring Data review

6.1 Port activity (vessel movements)

Port activity data from 01 January 2025 to 31 December 2025 is summarised in Table 6.1. The presence of cruise and other vessels during the monitoring period is overlaid, using different colours on the 1-hour and 24-hour concentration plots for all monitored pollutants. This port activity information is used to support the interpretation of any observed pollutant exceedances. Where exceedances were identified, the corresponding activity records were reviewed to assess whether vessel operations or other berth-related activities may have contributed to the event.

The berth locations are shown in Figure 6.1.

Table 6.1 Port activity data between 01 January 2025 and 31 December 2025

Arrival (AEST)	Departure (AEST)	Vessel	Berth	Vessel type

³ The Pacific Adventure was renamed to the Carnival Adventure.

⁴ On 26/03/2025 at 08:42, Pioneer moved from GLB7 to WHT4. Then, it went back to GLB7 on 26/03/2025 at 11:24. On 28/03/2025 at 07:39, Pioneer moved from GLB7 to WHT4. Then, it went back to GLB7 on 28/03/2025 at 10:48.

⁵ A movement of the Crown Trader was recorded at 10:15 on 24/05/2025, but the vessel did not leave GLB7.

⁶ Pioneer moved from GLB7 to WHT4 at 07:48 on 27/05/2025 and returned to GLB7 at 10:18 the same day.

⁷ The details of this visit are provided in the monitoring report located on the Port Authority website.

¹⁴ Hansa Homburg moved from WHT4 to GLB1 at 08:50 on 23/11/2025 and returned to WHT4 at 08:32 on 25/11/2025. On 30/11/2025, Hansa Homburg moved from WHT4 to GLB1 at 08:26 and returned to WHT4 on 05/12/2025 at 06:17.

¹⁵ Adelie moved from GLB7 to WBCT at 18:43 on 16/11/2025 and returned to GLB7 at 21:10 on the same day.

¹⁶ Douglas Mawson arrived at WHT4 on 24/11/2025 and moved to WBCT on 25/11/2025 at 04:50. Its departure from WBCT was on 27/11/2025.

¹⁷ Viking Orion arrived at WHT4 on 30/11/2025 and moved to WBCT on 01/12/2025 at 19:07. Its departure from WBCT was on 03/12/2025.

Figure 6.1 Berth locations and monitoring locations

6.2 Wind pattern

The general wind climate at a site is displayed by means of wind rose plots, giving the frequency of winds from different directions for various wind speed ranges. Figure 6.2 and Figure 6.3 present the average wind roses measured at Glebe Island station for the period January to December 2025, and at the Grafton Street station for the period August to December 2025, respectively.

As the Grafton Street wind rose is based on approximately five months of monitoring data, it is not considered representative of annual wind conditions. In addition, the Glebe Island wind rose reflects only 68.2% of wind data for 2025, with a substantial data gap between March and July 2025. As a result, the Glebe Island wind rose is also unlikely to be representative of wind conditions across the full 2025 calendar year.

The average wind rose for the data period at Glebe Island is shown in Figure 6.2 and it shows the following features:

- The predominant annual average wind direction was from the east-northeast comprising approximately 16% of all recorded winds, followed by winds from the west (10%).
- The average wind speed was 2.7 m/s.
- Calm conditions (wind speeds less than 0.5 m/s) occurred 3.9% of the monitoring period.

The average wind rose for the data period at Grafton Street is shown in Figure 6.3 and it shows the following features:

- The predominant annual average wind direction was from the west-southwest comprising approximately 14% of all recorded winds, followed by winds from the north (8%).
- The average wind speed was 1.6 m/s.
- Calm conditions (wind speeds less than 0.5 m/s) occurred 13.6% of the monitoring period.

6.3 PM_{2.5}

The 24-hour average PM_{2.5} concentrations observed at the Glebe Island and Grafton Street stations are presented in Figure 6.4, with periods during which a cruise or other vessel was present in the port highlighted.

Hourly average PM_{2.5} concentrations pollution roses (cruise in port, bulk/other vessel in port and no vessel in port) at Glebe Island and Grafton Street are shown in Figure 6.5 and Figure 6.6 respectively by hourly average wind direction.

The polar plot of hourly PM_{2.5} concentration among the two onsite stations is provided in Figure 6.7. This plot shows the contribution of the total PM_{2.5} concentration for each wind direction and wind speed over the respective monitoring periods.

6.5 SO₂

The 1-hour average SO₂ concentrations observed at the Glebe Island and Grafton Street stations are presented in Figure 6.12, with periods during which a cruise or other vessel was present in the port highlighted.

The corresponding 24-hour average SO₂ concentrations observed at the Glebe Island and Grafton Street stations are presented in Figure 6.13, with vessel presence similarly highlighted.

Hourly average SO₂ concentrations pollution roses (cruise in port, bulk/other vessel in port and no vessel in port) at Glebe Island and Grafton Street are shown in Figure 6.14 and Figure 6.15 respectively by hourly average wind direction.

The polar plot of hourly SO₂ concentrations among the two onsite stations is provided in Figure 6.16. This plot shows the contribution of the total SO₂ concentration for each wind direction and wind speed over the respective monitoring period.

7. Data analysis

Analysis of the data collected from the Glebe Island and Grafton Street stations has been undertaken for each pollutant including comparison against:

- concurrent meteorological conditions measured by two co-located weather monitors (wind speed and wind direction)
- observations from the nearby NSW EPA stations:
 - Rozelle station (PM_{2.5}, NO₂ and SO₂ available)
 - Bradfield Highway station (PM_{2.5}, NO₂ and SO₂ available)
 - Cook and Phillip station (PM_{2.5}, NO₂ available and SO₂ unavailable)
- the criteria (as per Table 3.4)
- port activity (presence or absence of cruise and other vessels) (as per Table 6.1)

It is important to note that the data of nearby NSW EPA stations used in this report has been collected from the NSW government website and has not been through a quality assurance / quality control procedure.

The validated monitoring data collected from the Glebe Island and Grafton Street stations are provided in Appendix B.

7.1 PM_{2.5}

7.1.1 24-hour average results

The 24-hour average PM_{2.5} concentrations and corresponding wind speeds from the Glebe Island and Grafton Street stations are presented in Figure 7.1, alongside with observations from the nearby NSW EPA stations and the relevant assessment criterion.

A summary of the correlation analysis based on 24-hour average concentrations is provided in Table 7.1. Correlations between the two Bays Precinct monitoring stations and three nearby NSW EPA stations range from 0.72 to 0.84, indicating a highly positive relationship with the regional background PM_{2.5} levels.

Table 7.1 24-hour PM_{2.5} concentration correlation matrix between Bays Precinct monitoring stations and nearby EPA stations

Stations	Glebe Island	Grafton Street
EPA station – Rozelle	0.78	0.81
EPA station – Bradfield Highway	0.72	0.82
EPA station – Cook and Phillip	0.79	0.84

Figure 7.1 24-hour average PM_{2.5} concentrations (µg/m³) at Bays Precinct and nearby NSW EPA stations (January 2025 to December 2025) (criterion: 20 µg/m³)

7.1.2 Long term results

Table 7.2 summarises the monthly average PM_{2.5} concentrations measured at the two onsite monitoring stations and at nearby NSW EPA monitoring stations.

An annual average criterion of 7 µg/m³ applies for PM_{2.5}. The annual average PM_{2.5} concentration measured at the Glebe Island station over the 12-month monitoring period was 5.6 µg/m³, which is below the applicable criterion.

Monitoring at the Grafton Street station commenced in August 2025 and includes only five months of data. As such, the dataset is not representative of a full annual monitoring period and is not suitable for assessment against the annual average criterion.

Table 7.2 Monthly average PM_{2.5} concentrations among Bays Precinct and nearby NSW EPA stations (µg/m³)

Month	Glebe Island	Grafton Street	EPA station – Rozelle	EPA station – Bradfield Highway	EPA station – Cook and Phillip
January	-	-	6.4	8.3	5.8
February	5.3	-	6.1	8.4	6.1
March	4.6	-	5.9	7.4	5.2
April	5.2	-	6.6	8.4	5.9
May	4.9	-	5.4	7.3	5.5
June	9.3	-	8.7	8.7	7.9
July	6.9	-	6.0	6.6	5.6
August	5.3	-	4.5	5.8	4.8
September	4.2	5.3	6.5	8.1	6.4
October	4.6	4.3	6.4	7.7	6.4
November	4.6	4.3	7.1	8.2	6.7
December	6.6	8.2	9.2	10.3	8.7
Total¹	5.6	5.4	6.6	7.9	6.3

Note

“-” indicates less than 50% available data for monthly average

¹ Total average is calculated from all available 1-hour data across the full monitoring period, not as an average of monthly values

7.1.3 Discussion of results and exceedances

During the monitoring period, several exceedances of the 24-hour average PM_{2.5} criterion (20 µg/m³) were recorded:

- At Glebe Island station, exceedances occurred on 22 June and 6 December, with measured concentrations of 20.5 and 25.6 µg/m³, respectively.
- At Grafton Street station, exceedances were observed on 6 December, with a measured concentration of 24.8 µg/m³.

Glebe Island station on 22 June 2025 (20.5 µg/m³)

An exceedance of 24-hour PM_{2.5} criterion, with a concentration of 20.5 µg/m³, was recorded at Glebe Island station. Concurrent measurements showed two spike concentrations at Cook and Phillip NSW EPA station (18.5 µg/m³) and at Rozelle NSW EPA station (20.9 µg/m³). PM_{2.5} data from the Bradfield Highway station and Grafton Street station were not available on this day.

Wind data from Glebe Island station was not available on this day due to a temporary wind sensor fault. Rozelle NSW EPA station indicates predominantly north-westerly winds (296.7°) with a low average wind speed of 0.8 m/s.

Given that the Rozelle station is located approximately 2 km west of the Glebe Island station, the recorded wind conditions are considered representative of the broader local area. While representative of the broader area, this data is not co-located and may not fully capture local wind channelling effects near the harbour.

During this period, nearby vessel activities included:

- Bulk vessel Wyuna berthed at GLB8 between 22/06/2025 4:30 and 23/06/2025 18:05
- Vessel HMAS Canberra berthed at WHT4 between 14/06/2025 17:20 and 23/06/2025 13:15

Berth GLB8 and berth WHT4 are located to the southwest and the north of the Glebe Island station (refer to Figure 6.1), respectively. However, the prevailing north-westerly wind conditions were not aligned with the direction from the berth towards the monitoring station, indicating that emissions from the berthed vessel are unlikely to have contributed significantly to the elevated PM_{2.5} concentrations recorded at Glebe Island.

The concurrent PM_{2.5} spikes observed at multiple NSW EPA stations suggest a potential regional increase in background PM_{2.5} levels during this period. While this spatial correlation supports the influence of regional background conditions, these correlations do not conclusively demonstrate that the elevated concentrations at the Glebe Island station were solely due to background conditions.

Glebe Island station (25.6 µg/m³) and Grafton Street station (24.8 µg/m³) on 6 December 2025

Exceedances of 24-hour PM_{2.5} criterion, with concentration of 25.6 and 24.8 µg/m³, were recorded at Glebe Island station and Grafton Street station respectively. Concurrent measurements showed three spike concentrations at Bradfield Highway station (33.2 µg/m³), Cook and Phillip NSW EPA station (31.5 µg/m³) and at Rozelle NSW EPA station (25.8 µg/m³).

Wind data from Glebe Island station and Grafton Street station indicates predominantly north-easterly winds (68.1° and 44.6°), with average wind speeds of 1.9 and 0.4 m/s respectively.

During this period, nearby vessel activity included:

- Vessel Hansa Homburg, berthed at WHT4/GLB1 between 30/10/2025 5:47 and 7/12/2025 14:03. Hansa Homburg moved from WHT4 to GLB1 at 08:50 on 23/11/2025 and returned to WHT4 at 08:32 on 25/11/2025. On 30/11/2025, Hansa Homburg moved from WHT4 to GLB1 at 08:26 and returned to WHT4 on 05/12/2025 at 06:17.
- Cruise Carnival Adventure, berthed at WBCT (WHT5) between 6/12/2025 4:57 and 6/12/2025 15:40
- Bulk vessel Luga, berthed at GLB8 between 6/12/2025 8:22 and 8/12/2025 21:54

Berths WHT4 and WHT5 are located to the south of the Grafton Street station and to the north of the Glebe Island station (refer to Figure 6.1). Under the prevailing north-easterly wind conditions, the Grafton Street station is generally upwind, while the Glebe Island station is downwind of these berths. As a result, emissions associated with activities in the vicinity of WHT4 and WHT5 would be more likely to influence concentrations measured at the Glebe Island station than at the Grafton Street station. This spatial relationship may partly explain the slightly higher PM_{2.5} concentration recorded at the Glebe Island station (25.6 µg/m³) compared to the Grafton Street station (24.8 µg/m³) during this period.

Concurrent PM_{2.5} spikes were observed at multiple NSW EPA monitoring stations, indicating a regional elevation in background PM_{2.5} concentrations during the same period. This consistent, spatially widespread pattern across the monitoring network suggests that regional background conditions were the primary contributor to the elevated PM_{2.5} concentrations observed at the Glebe Island station. The available evidence indicates that regional factors were the dominant driver, rather than vessel-related activities.

This regional background elevation is consistent with reports of a bushfire active in the vicinity of the Pacific Highway at Bulahdelah during this period, with evening smoke drifting south across the Lower Hunter, Central Coast and into Sydney (NSW Rural Fire Service, 2025). This regional smoke influence is therefore considered a likely contributor to the elevated background PM_{2.5} concentrations observed across the monitoring network and provides context for the concurrent PM_{2.5} increases recorded at both local and NSW EPA monitoring stations.

7.2 NO₂

7.2.1 1-hour average results

The 1-hour average NO₂ concentrations and corresponding wind speeds from the Glebe Island and Grafton Street stations are presented in Figure 7.2, alongside with observations from the nearby NSW EPA stations and the relevant assessment criterion.

A summary of the correlation analysis based on 1-hour average concentrations is provided in Table 7.3. Correlations between the two Bays Precinct monitoring stations and three nearby NSW EPA stations range from 0.14 to 0.26, indicating a weak positive relationship (<0.5) with the hourly regional background NO₂ levels.

Table 7.3 1-hour NO₂ concentration correlation matrix between Bays Precinct monitoring stations and nearby EPA stations

Stations	Glebe Island	Grafton Street
EPA station – Rozelle	0.26	0.14
EPA station – Bradfield Highway	0.20	0.14
EPA station – Cook and Phillip	0.26	0.14

Figure 7.2 1-hour average NO₂ concentrations (ppb) at Bays Precinct and nearby NSW EPA stations (January 2025 to December 2025) (criterion: 80 ppb)

7.2.2 Long term results

Table 7.4 summarises the monthly average NO₂ concentrations measured at the two onsite monitoring stations and at nearby NSW EPA monitoring stations.

An annual average criterion of 15 ppb applies for NO₂. The annual average NO₂ concentration measured at the Glebe Island station over the 12-month monitoring period was 11.5 ppb, which is below the applicable criterion.

Monitoring at the Grafton Street station commenced in August 2025 and includes only four months of data. As such, the dataset is not representative of a full annual monitoring period and is not suitable for assessment against the annual average criterion.

Table 7.4 Monthly average NO₂ concentrations among Bays Precinct and nearby NSW EPA stations (ppb)

Month	Glebe Island	Grafton Street	EPA station – Rozelle	EPA station – Bradfield Highway	EPA station – Cook and Phillip
January	-	-	3.0	11.0	3.8
February	8.3	-	4.0	12.9	5.1
March	8.2	-	4.0	12.5	4.6

November	10.6	9.0	4.8	16.8	3.3
December	8.9	9.0	4.2	13.3	5.8
Total¹	11.5	8.8	5.8	15.0	7.3

Note

“-“ indicates less than 50% available data for monthly average

¹ Total average is calculated from all available 1-hour data across the full monitoring period, not as an average of monthly values

7.2.3 Discussion of results and exceedances

No exceedances of the 1-hour or annual NO₂ criteria were observed at the Glebe Island station and the Grafton Street station during the monitoring period.

All hourly average NO₂ concentrations remained well below the adopted criterion of 80 ppb. The maximum hourly average concentration recorded was 61.3 ppb at Glebe Island station and 53.9 ppb at Grafton Street station. The maximum hourly average concentrations were both recorded at 10:00 on 6 December 2025.

7.3 SO₂

7.3.1 1-hour average results

The 1-hour average SO₂ concentrations and corresponding wind speeds from the Glebe Island and Grafton Street stations are presented in Figure 7.3, alongside with observations from the nearby NSW EPA stations and the relevant assessment criterion.

A summary of the correlation analysis based on 1-hour average concentrations is provided in Table 7.5. Correlations between the two Bays Precinct monitoring stations and three nearby NSW EPA stations range from -0.03 to 0.15, indicating a weak relationship (<0.5) with the hourly regional background SO₂ levels.

Table 7.5 *1-hour SO₂ concentration correlation matrix between Bays Precinct monitoring stations and nearby EPA stations*

EPA station – Rozelle	0.07	0.15
EPA station – Bradfield Highway	0.02	-0.03
EPA station – Cook and Phillip	-	-

Figure 7.3 Hourly average SO₂ concentrations at Bays Precinct and nearby NSW EPA stations (January 2025 to December 2025) (criterion: 75 ppb)

7.3.2 24-hour average results

The 24-hour average SO₂ concentrations and corresponding wind speeds from the Glebe Island and Grafton Street stations are presented in Figure 7.4, alongside with observations from the nearby NSW EPA stations and the relevant assessment criterion.

A summary of the correlation analysis based on 24-hour average concentrations is provided in Table 7.6. Correlations between the two Bays Precinct monitoring stations and three nearby NSW EPA stations range from 0.50 to 0.69, indicating a moderate positive relationship with the regional background SO₂ levels.

Table 7.6 24-hour SO₂ concentration correlation matrix between Bays Precinct monitoring stations and nearby EPA stations

Note “-” indicates less than 50% available data for monthly average ¹ Total average is calculated from all available 1-hour data across the full monitoring period, not as an average of monthly values					

7.3.4 Discussion of results and exceedances

No exceedances of the 1-hour or 24-hour SO₂ criteria were recorded at either the Glebe Island or Grafton Street monitoring stations during the reporting period. All hourly average SO₂ concentrations remained well below the adopted 1-hour criterion of 75 ppb. The maximum hourly average concentration measured was 22.1 ppb at the Glebe Island station at 09:00 on 20 March 2025, and 15.8 ppb at the Grafton Street station at 23:00 on 18 December 2025.

Similarly, all 24-hour average SO₂ concentrations were well below the adopted criterion of 20 ppb. The highest 24-hour average concentration recorded was 5.1 ppb at the Glebe Island station on 20 March 2025, and 3.9 ppb at the Grafton Street station on 18 December 2025.

7.4 Summary of AQMS data

A summary of the AQMS data is provided in Table 7.8.

Table 7.8 Summary of AQMS data

Pollutant	Overall average	Exceedances	Activities	Exceedance potentially caused by:
Glebe Island station				
	– When no vessels were present: 9.1 ppb – Overall average: 8.8 ppb			
SO ₂	– When a vessel was present: 0.6 ppb – When no vessels were present: 0.4 ppb – Overall average: 0.5 ppb	No exceedances of the 1-hour or 24-hour SO ₂ criteria were observed	-	-

Figure 7.5 presents box plot comparisons of pollutant concentrations at the Glebe Island and Grafton Street stations during periods with and without vessel presence at berth. Overall, while median pollutant concentrations do not show dramatic differences between vessel and no-vessel conditions, the increased spread and frequency of elevated outliers during vessel presence periods suggest that ship activity may contribute to episodic pollution events rather than sustained elevated concentrations. This is consistent with the nature of vessel emissions, which are typically intermittent and influenced by meteorological conditions such as wind direction and wind speed.

Figure 7.5 *Pollutant concentrations of Glebe Island and Grafton Street stations by vessel presence*

8. Summary

This report presents the results of the Bays Precinct Air Quality Monitoring Program for the period 1 January 2025 to 31 December 2025, based on data collected at the Glebe Island and Grafton Street air quality monitoring stations. The program was implemented to characterise ambient air quality conditions within the Bays Precinct and to assess potential influences from port-related activities, including cruise and other vessel operations. Continuous monitoring of PM_{2.5}, NO₂ and SO₂, together with meteorological parameters, was undertaken in accordance with relevant Australian Standards. All validated data used in this assessment were NATA-accredited. To provide regional context, results from nearby NSW EPA air quality monitoring stations were also reviewed and compared against the applicable assessment criteria.

Overall, the monitoring results indicate that PM_{2.5}, NO₂ and SO₂ concentrations at the two locations generally remained within the adopted assessment criteria, with elevated concentrations primarily limited to specific short duration events.

For PM_{2.5}, a small number of 24-hour exceedances were recorded at both monitoring stations during the reporting period. These events coincided with elevated PM_{2.5} concentrations observed across multiple nearby NSW EPA stations, indicating the influence of regional background air quality conditions. While vessel activity was present during some exceedance periods, the available evidence suggests that regional factors were a significant contributor. Accordingly, the recorded exceedances are not considered to be attributable to any vessel activities.

For NO₂, no exceedances of the 1-hour or annual NO₂ criteria were recorded at either monitoring station. Hourly NO₂ concentrations remained well below the adopted assessment criteria throughout the monitoring period. Similarly, SO₂ concentrations were consistently low, with no exceedances of either the 1-hour or 24-hour criteria observed. Both short-term and longer-term NO₂ and SO₂ were substantially below the relevant assessment thresholds.

In summary, the 2025 monitoring results indicate that air quality within the Bays Precinct was generally consistent with regional background conditions and remained below the adopted assessment criteria for the majority of the reporting period. The findings support the ongoing implementation of the air quality monitoring program to continue building a robust long-term dataset, improve understanding of local and regional influences on air quality, and inform the ongoing management of port-related activities within the Bays Precinct.

01/09/25 00:05	30/09/25 00:15	Automatic overnight background check and instrument stabilisation on SO ₂ analyser daily approximately from 00:05 to 00:15	SO ₂	XK	21/10/25
01/09/25 01:00	30/09/25 01:45	Automatic overnight span check and instrument stabilisation on SO ₂ analyser and NO _x analyser daily approximately from 01:00 to 01:45.	SO ₂ , NO, NO ₂ , NO _x	XK	21/10/25
01/09/25 09:55	03/09/25 07:15	Intermittent instrument faults - NO _x analyser status active	NO, NO ₂ , NO _x	XK	21/10/25
01/09/25 16:00	01/09/25 17:00	Scheduled commissioning maintenance - BAM zero filter removed	PM _{2.5}	XK	21/10/25
01/09/25 17:15	04/09/25 10:30	Intermittent data gaps - termination panel faulty	AT, RH, WS, WD, Sigma	XK	21/10/25
01/09/25 18:00	02/09/25 09:00	Static offset of -4.9 µg/m ³ applied to correct PM _{2.5} baseline based on the background test result	PM _{2.5}	XK	21/10/25
02/09/25 10:00	02/09/25 10:00	Non-scheduled maintenance - BAM background value updated	PM _{2.5}	XK	21/10/25
02/09/25 11:00	03/09/25 10:00	Unrealistic readings out of instrument measurement range	PM _{2.5}	XK	21/10/25
03/09/25 11:00	03/09/25 14:45	Scheduled commissioning maintenance and instrument stabilisation - NO _x analyser power supply replaced	SO ₂ , PM _{2.5} , NO, NO ₂ , NO _x	XK	21/10/25
04/09/25 10:35	04/09/25 10:45	Scheduled commissioning maintenance - termination panel replaced (ID: 18-1045 IN and ID: 22-2222 OUT)	AT, RH, WS, WD, Sigma	XK	21/10/25
05/09/25 14:55	05/09/25 15:05	Scheduled commissioning maintenance - AT/RH sensor precision check and wind sensor zero check performed. Siting audits performed on site	WS, WD, Sigma	XK	21/10/25
11/09/25 12:00	11/09/25 13:00	Brief power interruption	All parameters	XK	21/10/25
23/09/25 15:00	23/09/25 16:40	Scheduled monthly maintenance	All parameters	XK	21/10/25

October 2025

Start Date	End Date	Reason	Change Details	User Name	Change Date
01/10/25 00:05	31/10/25 00:15	Automatic overnight background check on SO ₂ analyser daily approximately from 00:05 to 00:15	SO ₂	XK	23/01/26
01/10/25 01:00	31/10/25 01:45	Automatic overnight span check on SO ₂ analyser and NO _x analyser daily approximately from 01:00 to 01:45.	SO ₂ , NO, NO ₂ , NO _x	XK	23/01/26
14/10/25 10:00	14/10/25 13:40	Scheduled 3 monthly maintenance - calibrations performed on gas analysers. BAM flow calibration performed	All parameters	XK	23/01/26
29/10/25 09:00	29/10/25 12:00	Non-scheduled maintenance - temperature sensor checked	Nil	XK	23/01/26

November 2025

Start Date	End Date	Reason	Change Details	User Name	Change Date
01/11/25 00:05	30/11/25 00:15	Automatic overnight background check on SO ₂ analyser daily approximately from 00:05 to 00:15	SO ₂	XK	23/01/26
01/11/25 01:00	30/11/25 01:45	Automatic overnight span check on SO ₂ analyser and NO _x analyser daily approximately from 01:00 to 01:45.	SO ₂ , NO, NO ₂ , NO _x	XK	23/01/26
13/11/25 13:50	13/11/25 15:20	Scheduled 3 monthly maintenance - calibrations performed on gas analysers. BAM maintenance tasks performed	All parameters	XK	23/01/26
19/11/25 11:00	19/11/25 12:30	Non-scheduled maintenance - termination panel changed	All parameters	XK	23/01/26

Bays Precinct Air Quality Monitoring System
Valid data exception tables

30/11/25 02:05	30/11/25 22:50	Intermittent instrument fault - unrealistic negative NO ₂ data	NO, NO ₂ , NO _x	XK	23/01/26
----------------	----------------	---	---------------------------------------	----	----------

December 2025

Start Date	End Date	Reason	Change Details	User Name	Change Date
01/12/25 00:05	31/12/25 00:15	Automatic overnight background check on SO ₂ analyser daily approximately from 00:05 to 00:15	NO, NO ₂	XK	23/01/26
01/12/25 01:00	31/12/25 01:45	Automatic overnight span check on SO ₂ analyser and NO _x analyser daily approximately from 01:00 to 01:45.	SO ₂ , NO, NO ₂ , NO _x	XK	23/01/26
02/12/25 10:00	02/12/25 12:45	Scheduled 2 monthly maintenance - calibrations performed on gas analysers. BAM maintenance tasks performed	All parameters	XK	23/01/26
02/12/25 14:15	25/12/25 12:05	Intermittent instrument fault - unrealistic negative NO ₂ data	NO, NO ₂ , NO _x	XK	23/01/26
09/12/25 00:20	11/12/25 00:40	Intermittent instrument stabilisation following automatic overnight background check	SO ₂	XK	23/01/26
09/12/25 00:40	10/12/25 00:00	Static offset of +0.7 ppb applied to correct the SO ₂ baseline	SO ₂	XK	23/01/26
11/12/25 00:45	31/12/25 00:00	Static offset of +0.4 ppb applied to correct the SO ₂ baseline	SO ₂	XK	23/01/26
15/12/25 10:00	15/12/25 14:00	Non-scheduled maintenance - spare BAM unit swapped out from site and repaired original BAM re-installed on site (ID: DN16564 IN and ID: FN12946 OUT). Zero filter installed on BAM	PM _{2.5}	XK	23/01/26
15/12/25 15:00	19/12/25 07:00	BAM background test running	PM _{2.5}	XK	23/01/26
19/12/25 08:00	19/12/25 10:00	Non-scheduled maintenance - BAM zero filter removed after 72 hour background test completed	PM _{2.5}	XK	23/01/26

These tables include all changes made to data during the validation process
